

# Test report - Deployment of Arktos Cluster without Mizar CNI on GCP

This document captures the steps to deploy an Arktos cluster lab without Mizar CNI. The machine in this lab used are GCE e2-standard-8 (8 vCPUs, 32 GB memory) and the storage size is 128GB, Ubuntu 18.04 LTS.

Date-10 Dec. 2021

## Create an instance on GCE

Created instance on GCE

|                          |                                     | Instance name  | Location      | Creation time                       | Machine type  | IP address         | External IP address | SSH |
|--------------------------|-------------------------------------|----------------|---------------|-------------------------------------|---------------|--------------------|---------------------|-----|
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | prajwal-arktos | us-central1-a | Dec 10, 2021, 12:04:22 PM UTC+05:30 | e2-standard-8 | 10.128.0.11 (nic0) | 34.132.197.216      | SSH |

SSH instance with credentials.

## Step-1: Update kernel (If required)

To check kernel, run following command

```
uname -a
```

output:

```
root@prajwal-arktos:~# uname -a
Linux prajwal-arktos 5.4.0-1058-gcp #62~18.04.1-Ubuntu SMP Mon Nov 15 07:49:04 UTC 2021 x86_64 x86_64 x86_64 GNU/Linux
root@prajwal-arktos:~#
```

Here kernel version is 5.4.0-1051-gcp which is less than the required kernel version, so to update the kernel version to 5.6.0-rc2, we used the following steps :

```
wget https://raw.githubusercontent.com/CentaurusInfra/mizar/dev-next/kernelupdate.sh
sudo bash kernelupdate.sh
```

output:

```

linux-libc-dev_5.6.0-rc2-1_amd64.d 100%[=====] 1.03M 5.70MB/s in 0.2s
2021-12-10 06:41:35 (5.70 MB/s) - './linux-5.6-rc2/linux-libc-dev_5.6.0-rc2-1_amd64.deb' saved [1082248/1082248]

## Step-2: Install dependencies

Run the following steps to install dependencies required for arktos deployment:

```
git clone https://github.com/Click2Cloud-Centaurus/arktos.git ~/go/src/k8s.io/arktos
-b default-cni-mizar
```

```
bash $HOME/go/src/k8s.io/arktos/hack/setup-dev-node.sh
```

```
echo export PATH=$PATH:/usr/local/go/bin\ >> ~/.profile
```

```
echo cd \"$HOME/go/src/k8s.io/arktos >> ~/.profile
```

```
source ~/.profile
```

output:

```

Done.
Please run and add 'export PATH=$PATH:/usr/local/go/bin' into your shell profile.
You can proceed to run arktos-up.sh if you want to launch a single-node cluster.
root@prajwal-arktos:~/go/src/k8s.io# echo export PATH=$PATH:/usr/local/go/bin\ >> ~/.profile
root@prajwal-arktos:~/go/src/k8s.io# echo cd \"$HOME/go/src/k8s.io/arktos >> ~/.profile
root@prajwal-arktos:~/go/src/k8s.io# source ~/.profile
root@prajwal-arktos:~/go/src/k8s.io/arktos#

```

## Step-3: Start Arktos cluster

Login to instance and run following steps to deploy arktos cluster without Mizar as CNI:

```
./hack/arktos-up.sh
```

*The terminal was stuck in this state.*

```

*****
Local Kubernetes cluster is running. Press Ctrl-C to shut it down.

Logs:
/tmp/kube-apiserver0.log
/tmp/kube-controller-manager.log

/tmp/kube-proxy.log
/tmp/kube-scheduler.log
/tmp/kubelet.log

To start using your cluster, you can open up another terminal/tab and run:

export KUBECONFIG=/var/run/kubernetes/admin.kubeconfig
or
export KUBECONFIG=/var/run/kubernetes/adminN(N=0,1,...).kubeconfig
cluster/kubectrl.sh

Alternatively, you can write to the default kubeconfig:

export KUBERNETES_PROVIDER=local

cluster/kubectrl.sh config set-cluster local --server=https://prajwal-arktos:6443 --certificate-authority=/var/run/kubernetes/server-ca.crt
cluster/kubectrl.sh config set-credentials myself --client-key=/var/run/kubernetes/client-admin.key --client-certificate=/var/run/kubernetes/client-admin.crt
cluster/kubectrl.sh config set-context local --cluster=local --user=myself
cluster/kubectrl.sh config use-context local
cluster/kubectrl.sh

```

Leave this terminal here as it is (do not close the terminal) and open new terminal of same instance

Open new terminal for same instance and run following commands:

## 1) Check node status

```
./cluster/kubectrl.sh get nodes -Ao wide
```

### Output

```

root@prajwal-arktos:~/go/src/k8s.io/arktos# ./cluster/kubectrl.sh get nodes -Ao wide
NAME      STATUS    ROLES    AGE      VERSION   INTERNAL-IP   EXTERNAL-IP   OS-IMAGE      KERNEL-VERSION   CONTAINER-RUNTIME
prajwal-arktos Ready     <none>    107m     v0.9.0    10.128.0.11   <none>        Ubuntu 18.04.6 LTS 5.6.0-rc2      containerd://1.5.5
root@prajwal-arktos:~/go/src/k8s.io/arktos#

```

## 2) Check Deployed pods status

Deploy test pods:

```
./cluster/kubectrl.sh apply -f https://github.com/Click2Cloud-Centaurus/Documentation/blob/main/test-yamls/test_pods.yaml
```

Check deployed pods:

```
./cluster/kubectrl.sh get pods -Ao wide
```

### Output

```

root@prajwal-arktos:~/go/src/k8s.io/arktos# ./cluster/kubectrl.sh get pods -Ao wide
NAMESPACE   NAME      HASHKEY      READY   STATUS    RESTARTS   AGE   IP           NODE      NOMINATED NODE   READINESS GATES

### 3) Check ping of deployed pods

```
./cluster/kubectll.sh exec -it netpod1 ping 10.88.0.5
```

```
./cluster/kubectll.sh exec -it netpod2 ping 10.88.0.4
```

#### Output

```
root@prajwal-arktos:~/go/src/k8s.io/arktos# ./cluster/kubectll.sh exec -it netpod1 ping 10.88.0.5
PING 10.88.0.5 (10.88.0.5) 56(84) bytes of data.
