not capable of running Kata Containers" arch=amd64 name=kata-runtime pid=4109
source=runtime ERROR: System is not capable of running Kata Containers
Aborted. Current system does not support Kata Containers.
Kata Setup done.
**********
Local Kubernetes cluster is running. Press Ctrl-C to shut it down.
Loas:
  /tmp/kube-apiserver0.log
  /tmp/kube-controller-manager.log
  /tmp/kube-proxy.log
  /tmp/kube-scheduler.log
```

```
/tmp/kubelet.log

To start using your cluster, you can open up another terminal/tab and run:
    export KUBECONFIG=/var/run/kubernetes/admin.kubeconfig

Or
    export KUBECONFIG=/var/run/kubernetes/adminN(N=0,1,...).kubeconfig
    cluster/kubectl.sh

Alternatively, you can write to the default kubeconfig:
    export KUBERNETES_PROVIDER=local
    cluster/kubectl.sh config set-cluster local --server=https://ip-172-31-35-226:6443
--certificate-authority=/var/run/kubernetes/server-ca.crt
    cluster/kubectl.sh config set-credentials myself
--client-key=/var/run/kubernetes/client-admin.key
--client-certificate=/var/run/kubernetes/client-admin.crt
    cluster/kubectl.sh config set-context local --cluster=local --user=myself
    cluster/kubectl.sh config use-context local
    cluster/kubectl.sh
```
